SIGHT Game Day: Run Sheet

Meeting 28 (Fri Oct 30, 2026, 11 AM): the informed consent question, slide 14

Everyone is remote and plays in a browser tab. Participants read the email from the ENT252 instructor, then answer three questions. **No answers or standings appear until all three questions have closed.** While people answer, the screen shows who has submitted in each group. Jev checks the open answers as they arrive. The game sits inside the 10-minute recruitment and timeline block.

Players	https://sight-game-day.vercel.app (QR code in the waiting room on slide 14; also paste the link in the Zoom chat)
Host	Slide 14 embeds the host screen. Outside the deck: https://sight-game-day.vercel.app/host
Admin key	`Fadel`; the screen asks once in your browser, then remembers it.
Groups	SIGHT Leadership (Co-PIs, Associate Research Scientist, PM) · Students (GRAs, undergraduates) · Discovery Center & Lora · Industry Partners (play along, no points shown)

1. Before the meeting

- Present `meeting28.html` from your own computer; the clips play only from the local copy.
- Open slide 14 and enter the key. Press **Reset** twice: the run number goes up and the waiting room empties.
- Leave the game link ready to paste into the Zoom chat.

2. The controls

The host screen has buttons, and no keyboard shortcuts.

Red button	always the next step, and it names that step
Close	stops the clock on the current question
Reset **Reset**	twice within 3 seconds: new empty run (the old run stays exportable)
Deck arrows	click them to change slides; after a click inside the game, the keyboard arrows stay with the game

3. The flow (about 10 minutes, then slide 15)

Join	2 min	"Open the link. First name, then your group." Watch the group counts fill.
Question 1	60 s	*Thoughts about the timeline: is this doable?* Yes/No. No points. The extra time is for reading the email.
Question 2	30 s	*If we can make the timeline work, should we proceed with this?* Yes/No.
Question 3	2 min	*Any thoughts or concerns about this plan?* Free text, up to 300 characters.
Reveal 1, 2	1 min	Yes/No bars by group; question 2 marks No as right.
Reveal 3	3 min	Every answer, concerns first, with group and tags. No voting. Read a few aloud.
Points	1 min	Points by group and question, ranked by total.
Slide 15		Consent form, 45 CFR 46.116(b), Lora's clip, and the path to ask the IRB about.

The clock does not advance by itself. When everyone in the panel has a check mark, or the clock runs out, press the red button.

4. Points

- **Question 2:** a *No* earns 2000 if instant, falling to 1000 at the buzzer. A *Yes* earns 0.
- **Question 3:** 2000 if Jev finds a concern, 1000 if it might, 0 if not.
- **Group score:** average points per player, so group size does not decide it. Industry Partners see no points and do not appear in the chart.

5. What Jev checks

Jev answers four yes/no questions about each answer, and code decides the result. A tag appears at a probability of 0.7 or higher. If all four fall below 0.3, the answer raised no concern; in between, it reads "Possible concern."

Voluntary	students could not freely decline (grade, exam, instructor pressure)
Consent	informed consent, or the right to refuse or withdraw
IRB	may conflict with the approved study, or needs IRB review
Ethics	coercion, undue influence, mixing grades with research

Tested live on Oct 30: invented answers classified as expected, including "I'd check with Kristen" (concern) and "the amendment may slip the schedule" (no concern). Real answers can still surprise it, so treat a tag as a prompt for discussion, not a ruling.

6. If something goes wrong

- **Blurb says "Not checked":** Jev could not be reached. The answer still shows and earns 0. The first reveal already retries.
- **Someone joins late:** they can join any time and answer whatever is open.
- **A player reloads:** same player and same score, on the same browser.
- **The clock ran out:** a question cannot reopen. Move on.
- **Host asks for the key again:** it is a new browser; enter it once.
- **Game fails entirely:** ask questions 1 and 2 as Zoom polls, and question 3 in the Zoom chat, using the email text below.

7. The email on screen

For the ENT252 (Computer Aided Additive and Subtractive Manufacturing) class this semester, we have 20+ students available to take part in the VR simulation training/testing that we discussed ahead of the beginning of the Fall semester. I am planning to have this work be a major portion of the final exam for the students in this course. Could we please begin the work to schedule the logistics of what this will look like for having these students take part in the VR simulation training/testing for the Haas lathe equipment in 0036 AM Hub? The class meets each Wednesday from 6:00 PM - 9:40 PM.

8. After the meeting, in R

```
url = "https://sight-game-day.vercel.app/api/export"
answers = httr2::request(url) |>
  httr2::req_headers("x-admin-key" = Sys.getenv("SG_ADMIN_KEY")) |>
  httr2::req_perform() |> httr2::resp_body_string() |>
  readr::read_csv()
```

One row per answer: run, first name, group, question, answer, correct, Jev status and tags, points, and time. The current run is the default; add `?run=` for an older one. Then delete the Vercel project and its Upstash store.
