

ITEMS IDENTIFIED DURING REVIEW OF SIGHT VR – Lora Cavuoto

July 6, 2026

Cobot

PPE Module

- Within the PPE items tooltip, there were multiple items mentioning how the PPE would be scored. These items should not be present in the instructional piece, it should be focused just on the actual recommendations. Therefore, the phrase “This objective passes when protective glasses are equipped.” should be removed.
- If the group prefers to keep the assessment information, then the grammar for this sentence should be changed to “This objective is passed...”
- Within this tooltip, the “Assessment” bullet should also be removed.
- Within the “Wear safe clothing” tooltip, there is also an Assessment bullet, but this should be removed.

- Within the clothing items, I noticed some confusions with similar items. The “Black Shirt” and “Short Sleeve Shirt” seem to be meaning the same thing, but have different photos. In addition, the “¾ sleeve shirt” seems to be very similar to “short sleeve shirt”. Only 1 of either black shirt or short sleeve shirt should be included, and either ¾ sleeve or short sleeve should be included.
- Within these items, the grammar for the labels is missing some hyphens in the items. It should read “short-sleeve” or “short-sleeved” and “rolled-up”

Boot Module

- When powering on the robot, for the “Robot Operational” label for the sequence below the last circle, the text for “Operational” spans 2 lines, with “a” and “I” going to a 2nd line. This happens even with the screen is enlarged. It should be on one line.

Shutdown Robot Module

- When shutting down the robot, I saw the same issue here for “Robot Operational” label running onto 2nd line. It should all be on one line.

The above persist through the assessment modules as well

Generate Cobot Program Assessment

- Instructions still appear in this assessment

July 8, 2026

In the Dashboard, I'm not sure how it is calculating "Total time spent". For me, it is showing 2 min for the Cobot Arm, although I spent more than that in the system the other day.

If I look at the Cobot Arm Modules, for each Module, it shows a "Most Recent Assessment Score" that I completed, but if I click "History", the pop-up for Assessment History says "No assessment history available" → After I completed 100% of the progress, it now shows in the Assessment History.

CNC Machine

CNC Machine Setup Module

- When doing the "Power on the machine" activity, on the control panel, the 'Y' for the Emergency Stop button goes onto its own line if the window is small. This goes away when the browser window is enlarged. The text box for Emergency Stop should be enlarged so that the text remains on 1 line independent of window size. → This seems to only happen on the 1st screen of the panel, the others are ok

Program the CNC Machine Module

- The same issue with the Emergency Stop text persists here. I'm not sure if it's coded just in one place, or if it needs to be adjusted at each point where it appears on the screen.

Run the CNC Machine Module

- For the tool tip that pops up when you're choosing the correct tool, the text should read "Choose the correct tool (Tool #2)" to match the formatting of the tool labels
- For the tool tip that pops up when you're choosing the 2nd tool to use, the text should read "Choose the correct tool (Tool #3)"

Clean the CNC Machine Module

- Same issue for the Emergency Stop text on the control panel

Clean the CNC Machine Assessment

- I think I pressed things incorrectly (on accident), but I still scored 100%.

Dashboard View

- When on the "Machines" screen, the "See Modules" and "Assessment" buttons do not align across the 3 machines due to the slightly longer text for Cobot Arm. If you change it to "Collaborative robot arm engineered...", does that bring the text up a line?

Milling Machine

Milling Machine Setup Module

- In the starting instruction box, “continue” in the text is currently lowercase. To be consistent with other modules, suggest capitalizing.

Milling Machine XYZ Axes

- In the starting instruction box, for the first bullet it lists “Y, X and Z axes”. While the order of the tasks is to do Y first, when listing, it seems a bit awkward. Suggest listing as “X, Y and Z axes”
- In the starting instruction box, “continue” in the text is currently lowercase. To be consistent with other modules, suggest capitalizing.
- When using the keys to rotate the saddle (in Adjust the Y-Axis), it does not clarify which direction Q and E move the rotation. Suggest indicating “counter-clockwise” for Q and “clockwise” for E. → this comment holds for the X and Z axes as well.
 - For the Z-axis, it may be helpful to indicate whether the direction leads to up or down motion also.
- For “Enable X-Axis Power Feed”, when you get to clicking this button, the resolution of the text on the panel itself is very fuzzy. The other words are readable, so I think it’s an issue of the font size. Suggest making the button label space larger and increasing the font.

Milling Machine - Configure End Mill Module

- For the module name, can take out “Milling Machine - “
- **A positive note** - in the Milling Machine - when the collet is installed and the collet assembly is installed, the pop-up box that comes up has a more clear visualization than what I noticed for the CNC machine for something like opening the doors.
- When turning the wrench to “secure the spindle configuration”, the increasing red color on the dial to indicate progress goes in the opposite direction of the motion and of the way that would typically be expected for increasing.
- The issue of the X-Axis Power Feed text being fuzzy persists into this module.
